

Terms of Reference – Summer Internship in Uganda

Background

Vittorio Bassi (USC), Tommaso Porzio (Columbia) and Jeanne Sorin (Chicago) are seeking to recruit a summer intern to help support a field project involving survey data collection on households and firms in Kampala, Uganda. The project is funded by the IGC and World Bank and is conducted in partnership with AirQo. The project seeks to study the distribution of environmental risk and amenities for households and workers at home, on the commuting route, and at work, using a combination of surveys and direct monitoring of pollution and heat exposure.

The duration of the internship will be between 8-12 weeks, depending on availability. The intern will be based in Kampala at our partner research firm Dyadic Research Impacts and will be involved in a pilot of the listing and survey activities. We will cover flights and visa costs, and provide a basic living allowance for the duration of the internship.

There is the possibility of promotion to a project manager position for an additional period of up to one year. The renewal/promotion will depend on performance and funding availability after the summer.

Specifics of the position

The intern will support the following initiatives:

- Organize and manage the field data collection, including managing teams of enumerators in the field
- Help import survey instruments into the data collection software (Survey Solutions)
- Help clean, organize and analyse the resulting survey data
- Write regular progress reports on field activities to be shared with the PIs and donors
- Help liaise with AirQo in Kampala for the pollution/heat measurement activities during the pilot.
- Help with dissemination of results to donors and policy makers in Uganda through other means (e.g., meetings and presentations)
- Help access and analyze other relevant datasets such as flood maps of Kampala, records of environmental policies implemented by the Ugandan government etc.
- Liaise between the field team in Uganda, Dyadic Research Impacts, and the PIs.

Selection Criteria

Successful candidates will have:

- Master's in Economics, Econometrics or related discipline (e.g. Public Policy). First year students in a two-year Master program will be considered.
- Substantial experience with Excel and STATA
- Proficiency in statistical and econometric analysis techniques
- Excellent communication skills (written and oral) in English
- Well-developed teamwork and collaborative abilities, and strong communication skills

The following are a strong plus:

- Experience managing field-work activities for data collection in developing countries
- Experience working with large datasets (e.g. administrative datasets, large surveys)
- Experience working in large teams

- Experience interacting with policy makers
- Experience coding and working with data collection software (in particular NAME)
- Knowledge of QGIS/ArcGIS or other geographic information systems

Location

The position is based at Dyadic Research Impacts in Kampala, Uganda. The intern will also have an opportunity to interact with the Uganda Country Team of the IGC, also based in Kampala.

Start date

Ideally early June 2026.

Application

Interested parties should contact Eugenio Cassese: eugenio.cassese@studbocconi.it, copying also Jeanne Sorin (jsorin@uchicago.edu). Please attach a one-page CV, a one-page statement of purpose and a recently written short sample STATA .do file. The application is rolling, so please apply as soon as possible. In this phase, applications should receive us no later than May 22nd, 2026.

Thanks,

Vittorio Bassi
